ARB PORTABLE AND ON-BOARD TWIN MOTOR AIR COMPRESSORS

July 2011

Following an exhaustive design and development program, ARB is pleased to announce the arrival of an all-new, ultra high performance air compressor. The new model features a twin motor design specifically engineered to fill the need for a relatively compact yet extremely high volume compressed air source. Available in vehicle mounted and portable versions, the compressor range suits a variety of needs, including Air Locker activation, tyre and recreational equipment inflation, plus the operation of many air tools.

Considered by four wheelers around the world to be a staple accessory for remote area travel, ARB air compressors provide an immediate source of compressed air anywhere a 12 volt power source is available. Manufactured in Australia from lightweight, high strength engineering grade materials, ARB's new twin motor on-board and portable compressors are built with sealed components for moisture and dust resistance, and are equipped with professional in-line circuit protection.

Suitable for many air tools, Air Locker activation (optional accessories required), tyre inflation, and camping or leisure gear, the compressors are 100% duty cycle and come equipped with an over pressure safety valve and feature a modest current draw. Delivering an impressive 132 litres per minute air flow at 200KPa, the twin motor air compressors have the highest air flow rate of any 12V compressor of their size on the market.

The compressor motors are water sealed, 100% ball bearing equipped, and feature a unique linear brush pre-load system for extra long life, low heat and quiet operation. Additionally, the motors for each compressor model are internally thermal protected to withstand extreme temperature damage, while the on-board unit also incorporates a relocatable splash resistant air filter for a cleaner, cooler air supply.

ARB's high volume portable air compressor comes in a quality carry case featuring internal pockets for the included inflation accessory kit and a 6 metre durable high temp air hose. The on-board twin motor air compressor is more than capable of handling Air Locker activation requirements and includes a full

ARB air compressors are individually leak tested, current draw tested and flow tested under load at the factory before packaging and come with a comprehensive 2 year warranty.

wiring loom for simplified installation and easy plug-in connectivity to Air Locker control solenoids.

A 24V twin motor on-board compressor is also available for consumers requiring an alternative power source and incorporates all of the features of the 12V twin on-board model. ARB also offers a range of air compressor accessories to help maximise the potential of the twin motor air compressors that can be seen in stores or on the ARB website.

ARB air compressors are individually leak tested, current draw tested and flow tested under load at the factory before packaging and come with a comprehensive 2 year warranty. As always, ARB's after sales service is second to none with each air compressor fully serviceable and replacement parts available worldwide.

Sold exclusively by ARB, the new ARB twin motor air compressor range is available at ARB stores and stockists throughout the country. For more information or details of the stockist nearest you, head to www.arb.com.au.

About ARB

Founded in 1975 in Melbourne, ARB 4x4 Accessories is now Australia's largest manufacturer and distributor of aftermarket 4WD accessories. With products including bull bars, protection equipment, Old Man Emu suspension, Air Lockers, roof racks, canopies and recovery equipment, our primary mission is to prepare vehicles for the remote and harsh conditions typically encountered off road. ARB currently has 41 stores and over a hundred stockists located across Australia, an office in Seattle, USA, and an export network reaching more than a hundred countries.
